## Summary of CTEH's Air Monitoring Activities for the Community In Response to the MC 252 Oil Spill

## Daily Summary for May 11, 2010

Air monitoring was conducted between Houma, LA and Panama City, FL to address public concern for crude oil vapors. The results of air monitoring for May 10, 2010 18:00 – May 11, 18:00 are shown in Table 1 and 2 below and the locations where monitoring was conducted are shown in the map below (Figure 1).

Table 1 Summary of Air Monitoring In Residential and Commercial Areas Along the Gulf Coast

Crude Oil Chemicals of Interest	Number of Measurements	Average Concentration (ppm)	Maximum Concentration (ppm)
Volatile Organic Chemicals including benzene (VOCs)	440	0	0
Hydrogen sulfide	438	0	0
Sulfur dioxide*	322	0	0
Benzene*	28 al 1228	0	0

<sup>\*</sup>Benzene and sulfur dioxide measured with detector tubes

Table 2

Particulates		Number of Measurements	Average Concentration (mg/m³)	Maximum Concentration (mg/m³)
Particulate Matter (PM10)*		319	0.027	0.11
	Total	319		

<sup>\*</sup>PM10 - is particulate matter less than 10 microns

Air monitoring results show that crude oil vapors were not detected throughout residential and commercial areas between Houma, LA and Venice, LA and Panama City, FL. Particulate levels show that concentrations were in range with baseline readings and were below levels of concern. Testing teams trained in odors also noted the presence or absence of crude oil vapors (Figure 2). No crude oil odors were detected between Houma, LA and Venice, LA and Panama City, FL.

Figure 1 Map Showing Where Air Monitoring is Being Conducted Throughout the Gulf Coast States

Note – green dot shows the locations of air monitoring

Odor Monitoring 2010/05/10 18:00 - 2010/05/11 18:00

Figure 2 – Odor Investigation Results

Note – blue dot means no odor detected, orange dot indicates that crude oil odors were detected.
